                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Run on:
        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: EXPRESSED IN CELLS OF THE RETINAL GANG
CELL LAYER DURING RETINAL AXON GUIDANCE TO THE OPTIC DISK.
SIMILARITY: Contains 1 sterile alpha motif (SAM) domain.
SIMILARITY: Contains 2 fibronectin type III domains.
SIMILARITY: BELONGS TO THE TYR FAMILY OF PROTEIN KINASES.

SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Expressed in endothelial cells.
SIMILARITY: Contains 6 cadherin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GO:0005911; C:intercellular junction; IDA.

-!- FUNCTION: THIS PROTEIN BINDS CALCIUM. THERE ARE BOTH HIGH AND
LOW AFFINITY CALCIUM-BINDING SITES.
-!- SUBUNIT: Monomer (By similarity).
-!- SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
-!- SIMILARITY: BELONGS TO THE CALRETICULIN FAMILY.

PATHMAY: Retinoic acid biosynthesis; first (rate-limiting) step.
SUBCELLULAR IOCATION: Membrane-associated.
SIMILARITY: Belongs to the short-chain dehydrogenases/reductases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (SDR) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        510
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Similarity

CC -: FUNCTION: Cellular adhesion molecule that may play an important coll in cell-cell interactions at interandothelial junctions.
CC -: FUNCTION: Cellular junctions. Unable to bind to catenins, CC useakly associates with the cytoskeleton (By similarity).
CC -:- SUBCELLULAR LOCATION: Type I membrane protein.
CC -:- SUBCELLULAR EDCATION: Type I membrane protein.
CC -:- SUBCELLULAR SPECIFICITY: Expressed in highly vascularized tissues contain a low cc level of expression. Prominent expression in the spleen.
-- SIMILARITY: Contains 6 cadherin domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

esterification of trans-aconitate (By similarity).
-:- CATALYTIC ACTIVITY: S-adenosyl-L-methionine + trans-aconitate = S-
adenosyl-L-homocysteine + (E)-3-(methoxycarbonyl)pent-2-enedicate.
-:- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-:- SIMILARITY: BELONGS TO THE METHYLTRANSFERASE SUPERFAMILY. TAM

"Reductive genome evolution in Buchnera aphidicola.";
Proc. Natl. Acad. Sci. U.S.A. 100:581-586(2003).
-I- FUNCTION: Catalyzes the first step in the biosynthesis of 2-
methylthio-N6 (delta(2)-isopentemyl)-adenosine (MS[2]I[6]A])
adjacent to the anticodon of several tRNA species (By similarity).
-I- CATALYTIC ACTIVITY: Isopentenyl diphosphate + tRNA containing 6-isopentenyladenosine.
-I- SIMILARITY: BELONGS TO THE IPP TRANSFERASE FAMILY.
                                                                                                                                                                                                                                  01-MAR-1992 (Rel. 21, Created)
